

Amendments to the Claims:

This listing of claims replaces all prior versions, and listings, of claims in this application.

Listing of Claims:

1. (Previously Presented) A scalable, profile-driven system for creating, managing and distributing media objects for the presentation of synchronous broadcast and/or interactive television programming, comprising:

a network operations center comprising a fault-tolerant, clusterable multi-processor hardware platform running a UNIX type operating system with a “best of breed” database and middleware executing thereon to communicate with one or more legacy systems that provide television programming production, management and distribution functionality;

an open standards, IP-based interface to the network operations center to provide access for one or more contributors to the television programming functionality of the legacy systems for the purpose of creating, managing and distributing television programming; and

one or more media delivery devices that receive the television programming directly or indirectly, and synchronously display television programming to one or more users through one or many delivery platforms and/or devices in a broadcast or interactive fashion; and

one or more edge servers and one or more JAVA-based player devices to integrate wireless QOS for the distribution of rich media.

2. (Original) The system recited in claim 1, wherein the network operations center provides a J2EE-based implementation.
3. (Original) The system recited in claim 1, further comprising an object-oriented playlist according to which the television programming is created, managed, secured and distributed.
4. (Previously Presented) The system recited in claim 3, wherein the television programming comprises objects whose creation, management, rights management and distribution is synchronized for playback across one or many reception devices.
5. (Original) The system recited in claim 1, wherein at least a portion of the television programming is customized for a one of the one or more users.
6. (Original) The system recited in claim 1, further comprising a classifier process to identify all participants and users.
7. (Original) The system recited in claim 1, further comprising one or more edge servers and one or more JAVA-based player devices to distribute both legacy and future TV programs.

8. (Currently Amended) The system recited in claim 1, comprising one or more edge servers and one or more JAVA-based player devices to distribute both real-time, streaming and non-real-time, store and forward program elements.

9. (Original) The system recited in claim 1, further comprising means for integrating legacy TV systems into a unified system capable of creating, managing and simultaneously distributing profile-driven, multi-distribution platform TV products.

10. (Original) The system recited in claim 1, further comprising means for integrating collaboratory and hybrid, peer-to-peer means in the creation, management, copy protection and distribution of TV objects and/or programming.

11. – 20. (Canceled)
